# Why follow design standards?

“A short, silly, amateur, and hopefully fun video on how following your company's web design standards might be useful to you.

A nod to all the (better and more professional) whiteboard videos that have gone before, and another nod to anyone who has found themselves defending standards.”

<http://www.youtube.com/watch?v=24uuzlaZIfM>

# Discussion: The video

- Design standards are a set of rules, guidelines and examples that specify the appearance of a user interface
  - Code guidance, Pattern Library
  - People who create & maintain the standards
  - Restrictive, Lots to learn, Too much work
- Consistency helps users
- It will save YOU pain
- It will save you time & money
- Upgrades are easier

# My agenda

(subject to change)

- Flash back to 2006, “challenges ahead”
- Actual changes
  - Types of UI specs
  - Governance
  - Broadening scope & *integration*
  - Business case & redesign
- Initial free-lance experience

# Who cares? Why care?

- Speed up the design process
- Create more consistent experiences
- Save your company money
- Still leave room for innovation

ibm.com

## ibm.com re-design & standards

Internet User Experience 2006

# 2006 Agenda

- **Design evolution of ibm.com**
  - Focus on “recent” “One Experience” redesign
- **Role of standards in the evolution**
  - Standards site
  - Relationship with other standards
  - Business as usual
  - Evolution from text to tools to embedded

- ibm.com standards
- About ibm.com standards
- Page elements
  - General requirements
- Page types
- Rich media
- Online applications
- Portlets
- Globalization
- Writing for ibm.com
- Standards references
- Standards tools
- Standards A-Z & topics indexes

## Page elements by region

### Right column region

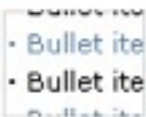

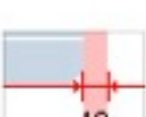

Before adding these page elements, you must review the [general requirements](#).

Click on a page region for more information about its elements.

- 1 Masthead region
- 2 Left navigation region
- 3 Content space region
- 4 Right column region
- 5 Footer region

### Right column elements

 <p><b>Bullet treatments</b> How to use bullets with links, non-linked text, and unordered lists.</p>	 <p><b>PDFs &amp; resources</b> Text-based information assets embedded on a page.</p>
 <p><b>Buttons</b> Small graphics used to indicate actions or steps within those actions.</p>	 <p><b>Prices</b> When to add prices to a page, and how to format them.</p>
 <p><b>Color palette</b> Required colors for ibm.com pages, their links, subheads, and text, etc.</p>	 <p><b>Printable version</b> Enables a visitor to print the currently displayed page.</p>
 <p><b>Column grids</b> Accepted variations for how text flows on a page.</p>	 <p><b>Promotion module</b> Used to highlight a timesensitive ibm.com offering.</p>
 <p><b>Cross links</b> Links to content in a separate business unit area of ibm.com.</p>	 <p><b>Ready to buy module</b> Used to transition the user from a product page to a commerce page.</p>
 <p><b>External links</b> Links to sites outside of ibm.com.</p>	 <p><b>Right column link list</b> Used for links to related content, positioned for</p>

ibm.com standards > Standards tools >

## Container generator

### Edit

Use this form to generate content container code conformant with OneX/V14 standards. The "Subhead text" field is required. You must follow all standards for [subhead bars & outlines](#).

**Width** 443 pixels (use in main column) ▼

**Colors**

Title	Title	Title
-------	-------	-------

**Subhead text\*** Internet User Experience 2006

**Content text**

cross-company standards, marketing needs, technical standards, user interface guidelines, information architecture, navigation, visual design and legal requirements on both the recent redesign of ibm.com and the ongoing improvement of the web user experience.

[Update]

---

### Preview and code

Internet User Experience 2006

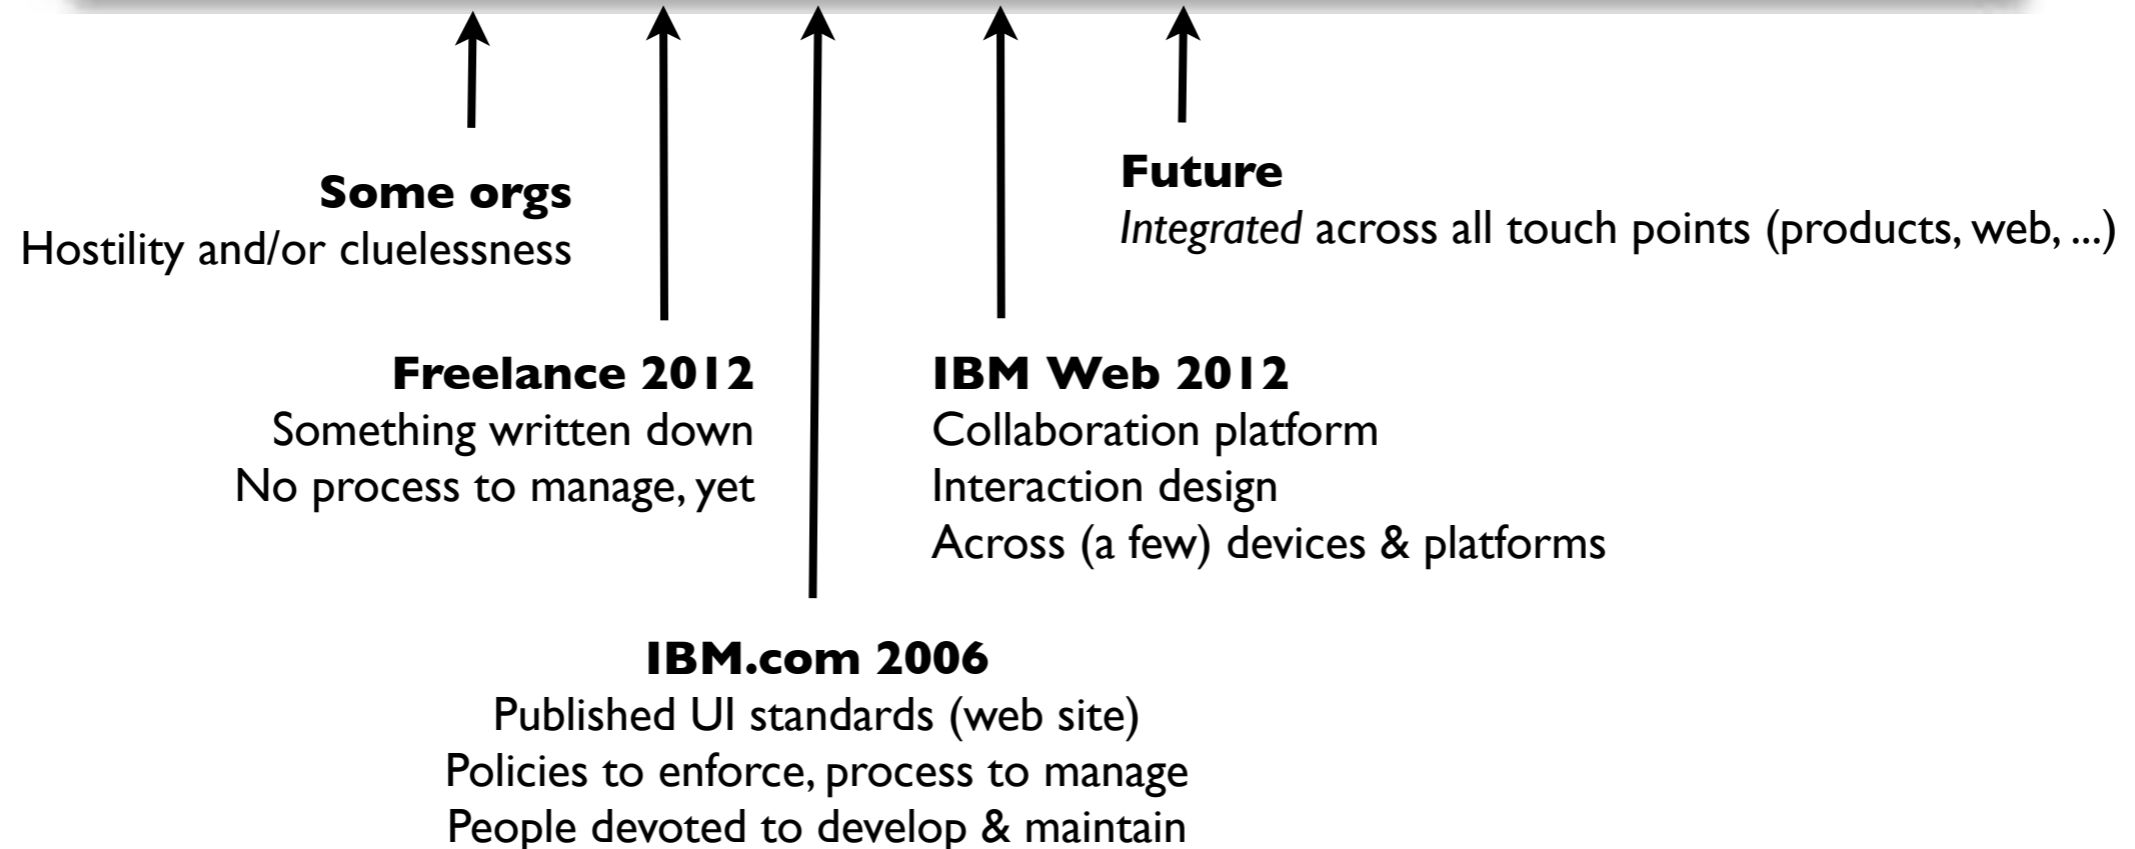

The presenters will discuss the influence of cross-company standards, marketing needs, technical standards, user interface guidelines, information architecture, navigation, visual design and legal requirements on both the recent redesign of ibm.com and the ongoing improvement of the web user experience.

```
<table border="0" cellpadding="0" cellspacing="0" width="443">

<td class="v14-header-2">Internet User Experience 2006</td>
</tr>
</table>
```

# 2006: Challenges ahead

- **Embedded standards, not published standards**
  - Centralized projects to save money and improve the UX
- **Adaptive experience**
  - The Holy grail of a fully integrated web site
- **Modular user interface (& functionality) design**
  - From page design to “portlet” design
  - Reused in many contexts
- **Web 2.0**
  - Standards and guidelines for syndicated content, blogs, wikis, Ajax, etc.

# Evolutionary view

2006-2012:

# UIs are a lot more complicated

- Web grew up beyond hypertext: interaction design matters (& touch)
- Desktop flashbacks
- Harder to explain UI with text & static images
- Prototypes
- Device (re) explosion
- Smart phones, tablets, ...

2006-2012:

# UI elements are harder to describe

1. Accordion

2. AutoSize

It also supports three AutoSize modes so it can fit in a variety of layouts.

- **None** - The Accordion grows/shrinks without restriction. This can cause other elements on your page to move up and down with it.
- **Limit** - The Accordion never grows larger than the value specified by its Height property. This will cause the content to scroll if it is too large to be displayed.
- **Fill** - The Accordion always stays the exact same size as its Height property. This will cause the content to be expanded or shrunk if it isn't the right size.

3. Control or Extender

4. What is ASP.NET AJAX?

Firewall On

Windows Firewall is actively protecting your computer.

Note: Two or more firewalls running at the same time can conflict with each other.

Accordion? Show/hide?  
Twisties? Disclosure Triangles? Chevrons?

2006-2012:

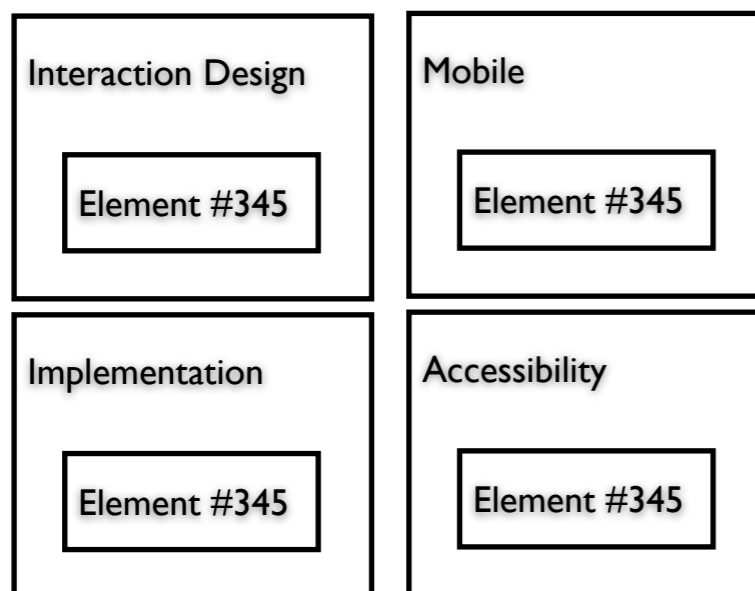

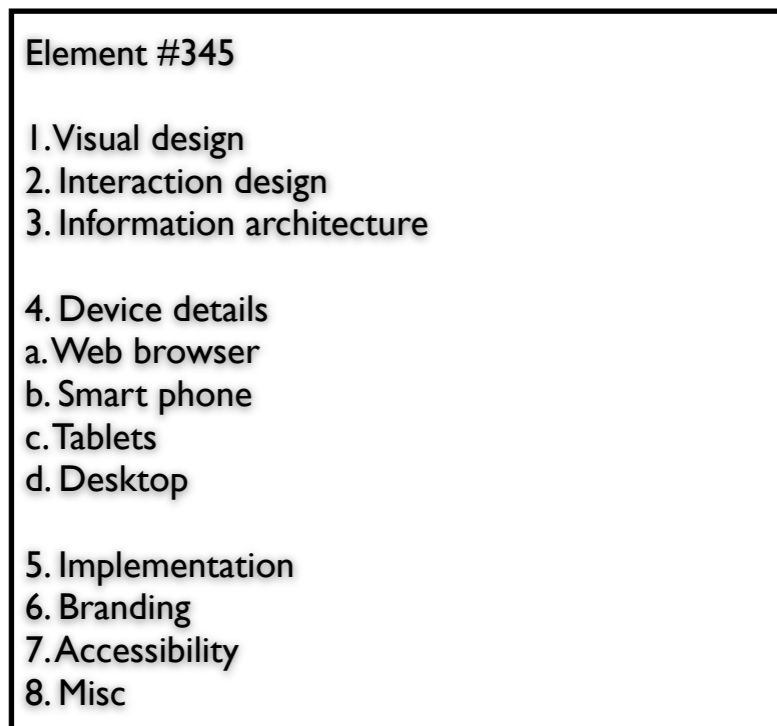

# UI elements are harder to describe

Carousel? What are the names of all of the pieces?

2006-2012:

# UI specs are harder to organize

- Do you separate the interaction design of an element from the visual design?
- Probably not, you add “how it behaves” to “how it looks”
- Do you write separate specs for each device/platform (web, desktop, smart phone, tablet, ...)?
- Probably, if “mobile” is a separate project
- Do you write separate accessibility, branding, implementation, etc. specs?
- Probably, unless you are a glutton for punishment

# 2006-2012: Governance: From Compliance to Collaboration

- Older (IBM) model: Compliance
  - Central team, Devoted resources, Rules
- Newer (IBM) model: Collaboration
  - Merged with UX design team, Tools > Rules (looser), DIY if engaged with community
  - Collaboration platform = Wikis, Discussions, Content management, Voting, Workflow (from draft to accepted/rejected to standard)
- Why change?
  - Lay-offs, Technology, Business “innovation”
- Challenges
  - Culture (“tell me what to do” vs. “whatever I want to do anyway”), Trust & control, Financial, Priorities

2006-2012:

# Broadening of scope (step 1)

Element	InTRAnet	InTERnet	Combined
Left navigation	<ul style="list-style-type: none"> <li>•Optional</li> <li>•3 levels</li> <li>•Related links</li> <li>•Highlighted page</li> <li>•Older CSS</li> </ul>	<ul style="list-style-type: none"> <li>•Required</li> <li>•2 levels</li> <li>•Related links</li> <li>•Highlighted page</li> <li>•“Up” link</li> <li>•Newer CSS</li> </ul>	<ul style="list-style-type: none"> <li>•Optional</li> <li>•3 levels</li> <li>•Related links</li> <li>•Highlighted page</li> <li>•“Up” link</li> <li>•Newer CSS</li> </ul>
Breadcrumbs	<ul style="list-style-type: none"> <li>•Top of content</li> <li>•“&gt;” hard coded</li> <li>•Optional</li> </ul>	<ul style="list-style-type: none"> <li>•Top of content</li> <li>• &lt;LI&gt; with CSS</li> <li>•Optional</li> </ul>	<ul style="list-style-type: none"> <li>•Top of content</li> <li>• &lt;LI&gt; with CSS</li> <li>•Optional</li> </ul>
Footer	<ul style="list-style-type: none"> <li>•Does not exist</li> </ul>	<ul style="list-style-type: none"> <li>•Footer bar</li> <li>•Service to update bar</li> </ul>	<ul style="list-style-type: none"> <li>•Rich footer (service)</li> <li>•Footer bar, service</li> </ul>

# 2011: Business case: UI specs as part of a Redesign

- “Happy Birthday, IBM, let’s do a Redesign to celebrate”
  - Intranet: way overdue
  - Internet: maybe needed, maybe not
- UI integration already underway, so tag along
  - Design & code once, re-use [Time, money, Consistency]
  - Best of intranet, internet, add new things [Innovation]
  - Build a common technical infrastructure [Strategic]
  - Single team to manage both [Money]
- Ahead of the game for total IBM integration

# “Global Information Architecture Guidelines”

- General principles
  - Simplicity & consistency
  - Brand guidelines
  - Look and feel
  - Technology
  - Copywriting
  - Social media
  - Mobile
  - ...
- Page Layouts
  - Masthead
  - Navigation
  - Body content
  - Content modules
    - Tabs
    - Tables
    - Forms
    - ...
  - Examples

# Recap, Discussion

Bumper sticker from zazzle.com

# Notes, questions from the presentation

- Style guides (just how it looks) vs. code libraries
- W3C/technical standards + UI standards
- Maturity: most were 1/2 step between Freelance 2012 & IBM 2006
- Device UI standards (like iOS)
- *Many more good questions and comments, but I cannot remember them all!*

# Tweets, edited (by @crfarnum)

- Design standards not equal to patterns
- Great video about the value of design standards: <http://m.youtube.com/watch?v=24uuzlaZIfM>
- Start high level, like color palette, high level page templates, later widgets and components.
- Should go hand in hand with code standards.
- Important success factor- how you share them. Via a site? If so it had better have a good IA.
- In Keith's practice in '06, 3 people were dedicated to maintaining the design standards and site(!!!)
- Governance- important to define how it works. Compliance -> Collaboration

# Thanks!

@keithinstone
